Assignments (Day 9)

- **Challenge 1:** Go to a long news article page (e.g., BBC, CNN).
  - Scroll down by 500 pixels using execute_script.
  - Scroll the page until a specific footer element is in view using arguments[0].scrollIntoView().
  - Take a screenshot of just the footer element (Selenium 4+).
  - Take a full-page screenshot.
- **Challenge 2:** Go to https://the-internet.herokuapp.com/upload.
  - Create a dummy text file locally.
  - Write a script to locate the file input and upload button.
  - Use send_keys() to select the dummy file.
  - Click the upload button.
  - Verify the success message contains the name of your dummy file.
- **Challenge 3:** Go to https://practicetestautomation.com/practice-test-login/.
  - Locate the password field using a standard locator (e.g., By.NAME).
  - Using relative locators, find the username field (<input>) located *above* the password field.
  - Using relative locators, find the "Submit" button (<button>) located *below* the password field.
- **Assignment 9:**

1. Combine scrolling and screenshots. Go to a long webpage (like Amazon's homepage).
2. Scroll to the bottom of the page.
3. Take a full-page screenshot and save it as bottom_page.png.
4. Scroll back to the top of the page.
5. Take a screenshot of the main navigation bar element only and save it as navbar.png.
6. (Optional) Research Chrome/Firefox options for setting a default download directory. Try to write the Python code (using Options) to configure the browser (even if you don't perform an actual download).

9. Interview Questions (Day 9)

1. How can you scroll a webpage using Selenium? What method is used? (driver.execute_script() with JavaScript like window.scrollTo or arguments[0].scrollIntoView).
2. Write the JavaScript command used with execute_script to scroll an element into view. (arguments[0].scrollIntoView(true);)
3. How do you take a screenshot of the entire browser viewport in Selenium Python? (driver.save_screenshot("path.png")).

4. How do you take a screenshot of just a specific WebElement (Selenium 4+)? (element.screenshot("path.png")).
5. Explain the correct technique for handling file uploads with <input type="file"> elements in Selenium. (Use send_keys("full/path/to/file") on the input element, do *not* click it).
6. Why can't Selenium directly interact with the OS file selection dialog? (Security restrictions).
7. How are file downloads typically handled in Selenium? What needs to be configured? (Configure browser Options to set download directory and disable prompts).
8. What are Selenium 4 Relative Locators? Why are they useful? (Locate elements based on visual position relative to others; good for elements lacking unique attributes).
9. What is the syntax for using relative locators? (locate_with(By...).DIRECTION(anchor_element)).
10. Name the 5 relative locator directions (above, below, to_left_of, to_right_of, near).
11. (Awareness Question) What is the Chrome DevTools Protocol (CDP), and what kind of advanced browser interactions can it enable in Selenium 4?
